Populations

The second part of a two-part, two volume study deals with high school youth and identifies target populations and communications strategies for encouraging personal action steps to prevent drunk driving. Data, collected from interviews and questi/onnaires, are summarized and presented in tabular form. One fourt# of high schoolers in a representative sample of 397 taken from 25 locations in the U.S. said they had driven once or twice when they knew they were too drunk to drive. About 32% said they rode in cars driven by a fleavily drinking driver at least once a, month. The youth believed their driving skills were relatively unimpaired by alcohol and that serious consequences do not exist for teen drunk drivers. Results were used to construct a personality profile of Alcohol Related Situations (ARS) - Involved Youth. Findings indicate that education programs should be aimed at correcting current misconceptions about drinking and driving and should depict personal action to prevent drunk driving as acceptable, expected behavior in the peer group. A Technical Appendix contains: Schematic Flow Chart of Study Operations, Sample Design and Field Procedures, Sample Tolerance, Development of Personality Scores, and a 21-item bibliography. The interview and questionnair forms are also included. (NTIS)

The study is in two volumes, the first dealing with adults aged 18-55, the second with high school youth. Both identify target populations and communications strategies for encouraging personal action steps to prevent drunk driving.

One fourth of high schoolers in a representative sample taken from 25 locations in the U.S. said they had driven once or twice when they knew they were too drunk to drive. Some 32 said they rode in cars driven by a heavily drinking driver at least duce a month. The youth believe their driving skills are relatively unimpaired by alcohol and that serious consequences don't exist/for teen drunk drivers.

Haif of the high school youth are drinking frequently and are unaware of the serious consequences of impaired driving. More than 74% believe a can of beer or a drink of wine is less intoxicating than an average drink of liquors

Seventy percent of those involved with alcohol believe it is the parents' responsibility to explain the use of alcoholic beverages.

Education programs should be aimed at correcting current misconceptions about drinking and driving and should depict personal action to prevent drunk driving as acceptable, expected behavior in the peer group.

Section I

BACKGROUND AND OBJECTIVES

BACKGROUND

NHTSA has traditionally directed alcohol and highway safety communications at the high school age group. It has been recognized that adoles cence is the time when most people are faced with the use or non-use of alcohol for the first time. At the same time it is also the age at which most people begin to drive, necessitating decisions about how they will relate their newly established drinking behavior to their recently acquired driving opportunities.

In the midst of a growing concern for these young drivers and pedestrians in the alcohol-use environment, NHTSA in association with Grey Advertising, while conducting a national adult study on alcohol and highway safety considered it highly desirable to supplement the adult study with a representative sample of high school students.

Results of these studies are reported in two volumes:

- . Adults 18-55 in a separate document, Volume I
- High School Youth in this document

OBJECTIVES

3

The primary objective of this study was to analyze a representative sample of high school students to provide NHTSA with strategic direction for communications programs aimed at this group. Therefore, this research addressed the following questions:

- . What is the size and nature of the target for NHTSA's high school youth programs?
- . What should the objectives be of NHTSA programs directed toward this target?
- How should these messages or programs be presented?
- What secondary targets are relevant to NHTSA's efforts among the youth population?

Section II

RESEARCH METHOD

.

METHOD

In order to meet these objectives, a two phase research design was executed.

la. <u>EXPLORATION</u>: To develop the measurement tool

Review of Existing Data

Relevant data sources* were reviewed to determine issues of concern and the data necessary for analysis.

Qualitative development

Two high school focus groups were conducted, one among drinkers, one among non-drinkers. This phase was used to develop hypotheses and, in addition, provided appropriate consumer language for the questionnaire in the measurement phase.

^{*} For bibliography see the Technical Appendix

Ib. PILOT TEST: To pre-test and refine the measurement tool.

.. Objective

In order to meet the research objectives it was recognized that a major portion of the necessary data was both personal and sensitive.

To insure both truthfulness and freedom of expression a two-fold resolution was suggested:

- The interviewing would be conducted in a central location out of the respondent's home.
- All personal behavioral data was collected in a self-administered answer booklet.

Test

The entire administration and interviewing process was pre-tested.

WHO? 16 completed interviews and the screening necessary to obtain them.

WHERE? \ Buston

WHEN? June, 1974

MEASUREMENT PHASE: To measure a representative sample of youth according to the objectives of the study.

WHO?

Ч.

1848 households were screened by telephone for high school students willing to participate in a study on general social issues. An eligibility quota based on sex and year in high school was applied.* Yield:

A. WHAT HAS BEEN ACCOMPLISHED BY NHTSA'S PAST COMMUNICATIONS EFFORTS?

- HIGHLIGHTS -

WHAT HAS BEEN ACCOMPLISHED BY NHTSA'S PAST COMMUNICATIONS EFFORTS?

- Like adults, U.S. high school youth ranked Drunk Driving as the fifth most important social issue with 71% saying it was an extremely or very important problem. This placed it immediately behind Drug Abuse, Crime, Pollution and Corruption in Government.
- As might have been expected, young people tended to downplay the economic issues of Inflation and Unemployment (this was early in the summer of 1974) when compared with the responses of adults.

B. MARKET DEFINITION

- . Size and nature
- . Alcohol attitudes
- . Drinking behavior
- . Driving behavior

- HIGHLIGHTS -

MARKET DEFINITION

- The use of alcohol in the unsupervised peer social occasion is a large and pervasive experience of the current high school population.
- Approximately half of the high school students report that once a month or more they are part of social occasions where alcohol is served and there is no adult supervision. This group, which we call the ARS—Involved, accounts for almost all of the peer/unsupervised occasions reported.
- The ARS—Involved group is not a fringe element of the youth group but draws from all age, class, and student types.
 - They are somewhat older, yet 25% are only fifteen years old or younger.
 - The group is slightly more male, yet fully four in ten are females.
 - They report the entire range of grades, activities, and social involvement as do the non-involved students, with 53% expecting to go to college and beyond.
 - These youth tend to rate their family unity as somewhat less close than other youth, but not significantly.
 - They have as large a circle of friends as others, and like other youth they name these peers as the ones they turn to when confronted with problems. ARS—involved youth are less likely to turn to their parents for help than are non-involved teens.

- The ARS—Involved group, while in the mainstream are, however, highly differentiated from the non-involved students by their personality profile.
 - When compared with the non-involved youth, these young people tend to be a good deal more social and group-centered.
 - They are more liberal and permissive and feel that their current environment is overly restrictive and authoritarian. They show very low respect for law when compared with other youth.
 - They display more impulsive, risk-taking personalities which encourage them to experiment with new experiences and are confident in their ability to make their own decisions.
 - They have formed relationships with many people, but not at any depth or level of commitment.

In general, as might be expected, the alcohol attitudes of the ARS—Involved can be described as more "pro" drinking than the non-involved. They have very positive feelings about teen drinking and the social utility of alcohol. This is understand—able in the context of their parents' own use of alcohol which is considerably greater than the non-involved group's.

The ARS—Involved high school student is not only in the alcohol related situation but is also a frequent user (and abuser) of alcoholic beverages.

- 45% report that they drink with a frequency of once a week or more.
- Over 40% (the same rate as for ARS adults)
 report "most drinks in any one day in the past week" they consumed were 4 or more.
- 61% of this group report they were drunk at least once in the past month.
- Even more than adults, beer is the most popular beverage by far, with 75% of the ARS-Involved youth group saying it is the beverage they drink most often.
- The major reasons given for the use of alcohol among the ARS—Involved are: as an aid to celebration and fun, because they like the taste, and for the feeling of getting high.

The drinking locations reported by the ARS—Involved underline both the lack of adult supervision and the involvement of the car in their drinking occasions.

While friend's or their own home are frequent locations, over a third indicated they drink while driving around or drink at the local hangout. Drive-ins also account for a fifth of the locations for drinking.

The main sources of alcoholic beverages for minors are report—edly legal-age friends and their own homes, not illegal purchases.

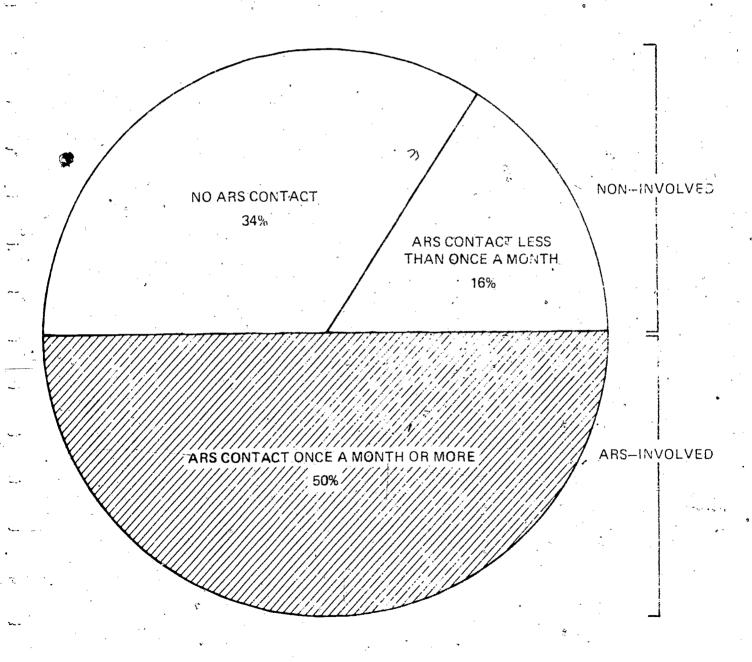

Peers are the most frequent drinking companions by far. Over half report they most frequently drink with male and female peers, with an additional 32% naming peers of their own sex as the most frequent companions. Practically none report drinking alone, thus, as we would expect, these involved individuals tend to associate more with other teens who drink.

About two-thirds of the ARS—Involved youth hold a valid driver's license or permit, and for 70% of them, the car they drive most frequently is a family vehicle.

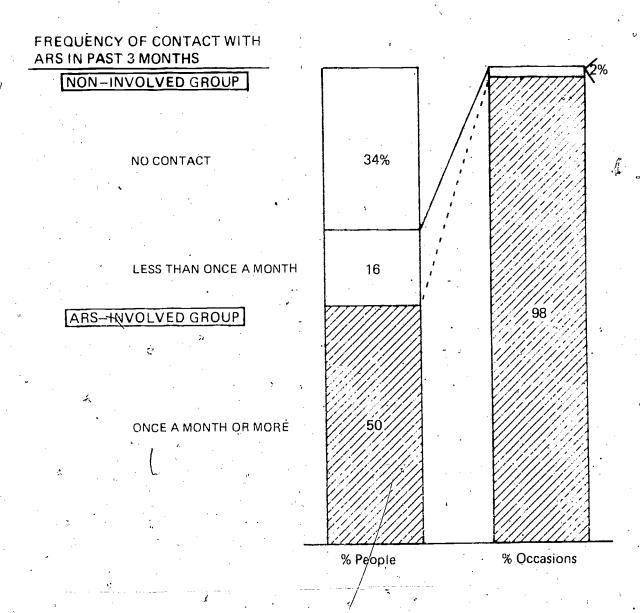

24% of this group who drive have had a moving traffic violation of some sort, twice the rate for the non-involved.

HOW DID WE DETERMINE THE PERSONALITY PROFILE OF THE ARS—INVOLVED YOUTH?

The personality description was prepared by Grey's consulting psychologist using information derived from a list of 34 self-administered personality inventory ratings obtained from each person in the study.

In order to assure an unbiased analysis of the personalities involved, independent of their demographic and attitudinal characteristics, the psychologist was given only the psychological data shown.

LINE FROM MARKET

RESPECT FOR LAW

I obey the law even when I am convinced it is in need of change.

If I can get away with it, I will break any law which I think is bad. (R)

HELPFULNESS TO OTHERS

I enjoy helping people even if I don't know them very well.

I try to get out of helping other people if I can. (R)

SOCIAL ALIENATION

Nowadays, a person has to live pretty much for today and let tomorrow take care of itself.

It's hardly fair to bring children into the world with the way things look for the future.

You sometimes can't help wondering whether anything is worthwhile.

HOPELESSNESS

There are many people who don't know what to do with their lives.

In a society where almost everyone is out for himself, people soon come to distrust each other.

NON-INVOLVE-MENT WITH PEOPLE

Letting your friends down is not so bad because you can't do good all the time for everybody.

People would be a lot better off if they could live far away from other people and never have to do anything for them.

LIBERALISTIC

Sexual behavior should be bound by mutual feelings, not by formal and legal ties.

Police should not hesitate to use force to maintain order. (R)

⁽R) = Phrase was reversed for factor scoring. For full description of scoring see the Technical Appendix.

FAMILY ALIENATION

- Sometimes I feel that my parents have no real understanding of what I want out of life.
- In dealing with my family, I do not believe that there really is a "generation gap". (R)

HOSTILITY

- I sometimes feel resentful when I don't get my own way.
- I can't help getting into arguments when people disagree with me.

AUTONOMY

- If I have a problem, I like to work it out alone.
- I usually try to share my problems with someone who can help me. (R)

⁽R) = Phrase was reversed for factor scoring. For full description of scoring see the Technical Appendix.

THE PERSONALITY/LIFESTYLE PROFILE OF THE ARS—INVOLVED YOUTH

When compared with the non-involved youth these young people tend to be a good deal more social and group-oriented, preferring to be with a group of their peers in most of their social activities. They are more likely to be liberal and permissive and feel that their current social environment is overly restrictive and authoritarian in its attitudes towards young people.

Their involvement in drinking tends to be very much of a social activity. It is also actuated by their desire to experiment with new experiences and their self-confidence in their ability to make their own decisions about what they want to do. They display an impulsive, risk-taking nature which tends to lead them toward dangerous situations without consideration of the consequence,

C. THE STRATEGIC PROBLEM

Knowledgeability

Willingness to act

- HIGHLIGHTS -

THE STRATEGIC PROBLEM

- ARS—Involved youth are knowledgeable about the major role of alcohol in traffic fatalities and the fact that problem drinkers cause more fatal accidents. Their levels of knowledgeability on these issues are very similar to the adult ARS—Involved group. They also agree in the abstract that a person who is drunk cannot compensate for it when he drives.
- They are aware of the penalties for selling to minors and the restrictions against youth possession of alcoholic beverages. They also tend to know someone who has been stopped for possession, but few have heard of any harsh consequences. In addition, this group is more aware than other youths of the penalties for DWI.
- The knowledgeability of ARS—Involved youth begins to break down with the concept of BAC. Although they have heard of the term and understand that it relates to blood alcohol content they do not know what levels make it illegal to drive in most states, nor how much alcohol, especially beer, it takes to reach those levels.

A large proportion of ARS—Involved youth display the same misperceptions as adults do about the causes, "cures" and consequences of intoxication.

- They believe a glass of wine and a can of beer to be less intoxicating than the average drink of liquor.
- _ They think that mixing drinks is more intoxicating.
- Even more than adults they tend to hold mistaken notions about what to do to sober up, believing that cold showers (70%) and black coffee (62%) are effective.

ARS—Involved youth agree that a person doesn't have to stagger to be drunk, but they feel it is easy to recognize impairment in others. They know you get drunk faster under medication and on an empty stomach, and accept the fact that a small person gets drunk faster than a larger one.

The belief that impairment is easily recognizable is borne out by the fact that almost two-thirds of ARS—Involved youth perceived themselves to have been in the potential DWI situation in the past year. This is strikingly contrasted to the less than 50% of ARS—Involved adults. On the other hand, among this high percent of perceivers only a little over half (58%) took some positive action in these situations as compared with three-quarters of the adults.

ARS—Involved youth frequently have driven or have been a passenger where the driver was drinking heavily. Their lack of concern can be attributed to risk-taking person—alities and their belief that death or serious injury is not a probable outcome from drunken teen driving. Also, they themselves don't feel they drive much worse when they are under the influence, with only 8% believing their ability was much worse when drunk.

D. COUNTERMEASURE POTENTIAL

- HIGHLIGHTS -

COUNTERMEASURE POTENTIAL

- Although they are generally less willing to take countermeasures than adults, ARS—Involved youth respond to the hypothetical situation where there is a need for action by expressing an underlying willingness to act, saying they would not just get out of the situation but would become involved.
- The specific countermeasures with the highest potential are the offer to drive the person home, and making sure no one rides with the drunk person.
- When in a group that frequently drinks and drives, the ARS—Involved expresses a strong likelihood to help limit the driver's drinking. Additional potential seems to exist for group action in making sure the heavy drinkers don't drive and that the problem is treated seriously.
- Seeking assistance from adults, either parents or police, does not present a viable alternative for countermeasure action.

Section IV

KEY FINDINGS AND IMPLICATIONS

KEY FINDINGS

- 1. There is an alarming number of drinking and driving occasions which occur among a large, mainstream group of youth. Half of the total high school youth account for 98% of all the unsupervised alcohol related (ARS) social occasions. These ARS-Involved youth report drinking approximately as often and as much as the ARS adults. In addition, one-third of them admit to being in a car where the driver had been drinking heavily at least once a month.
- 2. Not only is teenage drinking and driving a major problem but it represents a difficult condition to overcome since ARS—Involved youth display many of the same misconceptions as adults about the causes, "cures" and consequences of intoxication. In addition, ARS—Involved youth have impulsive, risk-taking personalities and are less concerned with the danger of driving when intoxicated. Finally, these youths appear most concerned with conforming to peer group norms, and it appears that prevention of drunk driving is considered not the "accepted thing to do".
- 3. Although the current group environment for taking countermeasure action is not highly favorable, there are indications of an underlying willingness on the part of individuals to become personally involved on behalf of friends. This willing as of the ARS—avolved youth to become personally involved with their friends represents an opportunity for action if the direction of group pressure could be changed from negative to a point where accordes acceptable to take countermeasure action.

70

IMPLICATIONS

1. WHAT ELEMENTS SHOULD NHTSA'S OVERALL YOUTH PROGRAM COMPRISE?

Because the scope and nature of the problem is so great, NHTSA's youth program for the prevention of teen drunk driving should incorporate an integrated, two-level-approach:

- . Communications and programs directed at youth.
 - The ARS-Involved themselves
 - Their peer influentials
- Communications and programs directed at the relevant publics which surround the ARS—Involved youth and act as youth influentials.
 - Parents
 - Schools
 - Community groups
 - Law enforcement groups

2. WHAT SHOULD THE OBJECTIVES BE FOR PROGRAMS DIRECTED AT YOUTH?

NHTSA's program objectives should be three-fold:

- . To correct current teen misconceptions about their drinking and driving
 - That a teen can compensate for it when he's drunk and driving
 - That a can of beer is less potent than a drink of liquor
 - That the way to sober up is black coffee or a shower
 - To imply that it is acceptable peer group behavior to give and accept aid when one is impaired, and
- To persuade youth to take relevant countermeasure actions
 - Get personally involved
 - Offer to drive a friend home

13.5

3. WHAT SHOULD NHTSA'S OBJECTIVES BE FOR THE OTHER RELEVANT PUBLICS?

A. Parents

The objectives for programs directed at parents of teens should be to create an awareness of the magnitude and seriousness of the problem, to encourage parents to help educate their teens to the facts and potential danger of the situation, and to support the desired teen countermeasure actions.

B. Schools

The objectives of the NHTSA's communications directed at high schools are the creation of special programs to help counter teen drunk driving and to gain support for teen peer group action against drunk driving.

C. Community Groups

Here we have two basic objectives: (1), to make them aware of the problem and (2) to persuade them to support the efforts against it.

D. Law Enforcement Agencies

The objectives here involve heightening their awareness of the growing problem of teen DWI, and the need to deal with it in a serious manner.

4. WHAT SHOULD BE THE STRATEGY FOR HIGH SCHOOL YOUTH COMMUNICATIONS?

The strategy for high school youth communications should encompass the following elements:

OBJECTIVES

- . Correct teens' misconceptions about their drinking and driving.
- Imply that it is acceptable peer group behavior to give and accept aid when one is impaired.
- Persuade youth to take relevant countermeasure action.

TARGET

ARS—INVOLVED HIGH SCHOOL YOUTH — a large segment of the high school population drawn from all ages, classes and types of students. This group is highly differentiated from other teens by their frequent and heavy unsupervised drinking of alcoholic beverages. These are impulsive, risk—taking youths who are very social and group—oriented.

MOTIVATING FACTORS

- Peer Acceptability It is acceptable in teen peer groups to get involved to prevent each other from driving when drunk.
- Outcome When a teen is drunk he can't compensate for it when he drives and is likely to kill or maim himself or an innocent person.

MOST LIKELY ACTION

- : Get personally involved.
- . Offer to drive a friend home

FOCUS OF ACTION

. Any teen friend who has had too much to drink.

SETTING

. Groups of teens, male and female, in unsupervised social situations.

TONALITY

Personally and emotionally involving (as opposed to abstract or intellectual), liberal and non-authoritarian, recognizing the teens' positive orientation toward risk—taking. Should also recognize their desire to have fun within a group environment and peer acceptance.

APPENDIX B

SAMPLE DESIGN AND FIELD PROCEDURES

In order to meet the research objectives of the NHTSA Youth Study it was necessary to include questions on subjects which were both personal and sensitive in nature. Therefore, a method of interviewing would be required which would insure both truthfulness and freedom of expression - free from either inhibitions or the temptations to boast.

After an examination of previous research done among high school students on the subject of alcohol, several important decisions were made concerning the location and nature of the youth interviews to be conducted for this study.

The interviewing would be conducted in central locations away from home and school influences.

All personal behavioral data was collected in a self-administered answer booklet and never seen by the interviewer.

No person other than a single interviewer was ever present during the questioning.

This procedure was pretested in the Boston area prior to the full study with.

each of the young people being "de-briefed" after the interview to check on
the validity of their responses. We found the technique to be both an
acceptable and accurate means of collecting the desired data.

As a result of the decision to use central location interviewing, a sample other than the in-home probability procedure had to be used.

Method

Twenty-five areas representative of the national picture were selected from the Grey probability sample to give adequate geographical distribution and reflect the metropolitan and non-metropolitan composition of the country.

The 25 central location areas chosen to give adequate geographic representation were:

Boston, Mass. Philadelphia, Pa. Rochester, N.Y. Ocean County, N.J. Suffolk County, N.Y: Crawford County, Pa. Chicago, Ill. Detroit, Mich. Battle Creek, Mich. Whitley County, Ind. Allegan County, Mich. St. Louis, Mg. Waterloo, Ia. Baltimore, Md. Charlotte, N.C. Norfolk, Va. ' Montgomery County, Va. Louisville, Ky. Bullock County, Ala. Fort Worth, Tex. Lynn County, Tex. Ogden, Utah Los Angeles, Calif. Portland, Ore. Eugene, Ore.

From these locations, 1848 households were randomly contacted for the presence of a high school student willing to participate in a study on "general social_issues." In addition, an eligibility quota based on sex and grade in school was placed on each area. The results of this screening were:

Households contacted	1848
Refused screening No eligible respondent	135
Student, parent refused	85 6
interview	208
Quotá for grade, sex filled	252
Eligible respondent interviewed	397

The resulting sample:

	TOTAL	MALE	FEMALE
HIGH SCHOOL	•		
Freshmen	96	· 48	48
Sophomores	101	.51	50
Juniors	100	48	52
Seniors	100	50	50
	397	197	200

This sample, though not a strict probability selection, is representative of the U.S. high school population in their drinking/driving attitudes and behavior. Although it is not possible to make absolute projections of the data we feel the proportions reflected in this study fairly reflect those of the total U.S. high school population and the conclusions drawn therefrom are reasonable and accurate. Any loss of precision in sampling has more than been compensated for in the truthfulness of the response.

APPENUIX J

SAMPLE TOLERANCES

(95% CONFIDENCE INTERVALS FOR NHTSA YOUTH STUDY)

Approximate Sample Involved Involved Involved	on- volved
Percentage Base = (397) (199)	•
	198)
90 . 3.0 4.2	4.2
80% 4.0 5.5	5.5
701 6.5	6.5.
5.0 6.9	6.9
	7.0
5.0	6.9
300 6.5	6.5
4.0 5.5.	5.5
3.0	4.2

io estimate whether or not the difference between two percentages from different bases is significant, add and subtract the indicated variance from each. If the resulting ranges intersect (overlap) the difference is probably not significant (19 chances out of 20), if they do not intersect the difference is probably significant.

The percent of ARS-Involved who rate their current grades as "Very Good" is 24". Among the Non-Involved this percent is 28%. The calculation is cone as rollows:

$$24\% \pm 5.5 = 18.5\% - 29.5\%$$

 $28\% \pm 6.5 = 21.5\% - 34.5\%$

the two ranges do not overlap, therefore the difference is probably significant.

fit of the ARS-Involved are male. The figure for Mon-Involved is 38.

$$61^{\circ} \stackrel{+}{=} 5.9^{\circ} = 64.10 - 67.90$$

 $383^{\circ} \stackrel{+}{=} 6.9 = 31.10 - 44.90$

The ranges do overlap, the difference is not significant.

- 1- (c) - 2

APPENDIX D

DEVELOPMENT OF PERSONALITY SCORES

The procedure for the analysis of the psychological data was carried out in the following three steps, which are discussed in detail below:

- Computation of factor scores.
- Assignment of respondents into high, medium and low factor score groups.
- . Computation of differences between the segments.

1. Computation of factor scores:

The first step is to assign a weight to each point within the rating scale. Because a 4-point rating scale was used in this study, a weight from one to four was given to each statement depending on how it was rated; a weight of 4 for top-box, a weight of 3 for the second box, a weight of 2 for the third box, and a weight of 1 for the bottom box.

Next, the scores for each statement within a factor were added up in order to obtain a score for each psychological factor. Thus, if a factor had two statements, the score for the factor ranged from a minimum of 2 to a maximum of 8.

DEVELOPMENT OF PERSONALITY SCORES (CONT'U)

Assignment of respondents into high, medium and low factor score groups:

Based on the percent of respondents who scored 8, 7, 6, 5, 4, 3, 2, for a given factor (which totals to 100% for each factor), each factor is then divided, as evenly as possible, into 3 equal groups of thirds. See an example below:

FACTOR NO. 8	TOTAL SAMPLE 100%
Scores: 8	17)
1	17) 18) 35% HIGH
6	34) } 34% MEDIUM
5	19)
4	7) 31% LOW
3 -	3) \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
2	. 2)

The group that includes the highest scores 8, 7, etc. is designated the "high" group, the group with the lowest scores 4, 3, 2, etc. becomes the "low" group, etc.

DEVELOPMENT OF PERSONALITY SCORES (CONT'D)

3. Computation of differences between the segments:

The high, medium and low divisions for each factor is then carried over in a cross-tab for each segment vs. the balance.

The final operations are a difference computation. First, for each factor the percent in the low group is subtracted from the percent in the high group for each segment and balance score. This yields the factor score for the segment and balance.

Secondly, the factor score for the balance is subtracted from the segment score to yield the profile score. For example.

		SEGMENT	BALANCE	
FACTOR NO. 1		<u>#</u>		
High		30%	35%	ŧ.
Medium		35%	40%	•
Low		<u>3/5%</u>	<u>25%</u>	
FACTOR SCORES		-5	+10	
	₹u	-5 (-)	+10= -15%PTS PROFILE SC	ORE

The profile scores are then charted in rank order from the highest positive to the highest negative.

		of the National Research Foundation. We are glad in our nationwide survey. Since this information old you on the phone, we would like to give you \$5
1.	HAND ARD A TO RESPONDENT'SAYIN	and social issues facing our country at this time. G: For each of the problems I read to you, would on this card best describes how important you feel
	FOR FACH PHRASE READ: How impo	rtant a problem do you think(PROBLEM) .
		$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$
	The energy crisis	[][][][][][][][][][][][][][][][][][]
	Corruption in the government. Poliution of the environment. frunk driving	\dots [][][][][] 10
	Invitation. Rac. d. Conflicts. Unemployment. Alchelism.	[][][][][]13

We are discussing these social issures with many people of all ages across our country we are interested in attitudes and opinions of teenagers and view them as being very important. You have been randomly selected to be interviewed on the topic of the use of alcoholic beverages and their place in society today. We are speaking to both drinkers and non-drinkers about this subject. You opinions will be very valuable and kept in the strictest confidence.

All information will be placed in this envelope and sealed in your presence. The envelope will not be opened until it reaches our home office where it will be tapulated with our respondents from all parts of the country.

As you know some people feel one way, some feel another about the use of alcoholic beverages. I'm going to give you a series of cards, each of which has a statement describing some aspect surrounding the use of alcoholic beverages. We would like you to tell us how much you agree with each of these aspects. To help you give us your opinion, we'll use this Opinion Rater (SHOW RESPONDENT "STRONGLY AGREE" TO "STRONGLY DISAGREE" SCALE ON OPINION RATER). As you can see, there are six boxes - each with a different label -- going from "Strongly Agree" to "Strongly Disagree." (POINT TO WERLS)

flease place each of these cards in the box that best describes how much you agree with it.

Here is the first card (HAND GREEN PRACTICE CARD). How much do you agree that "Fresh air sobers a person up"? Please place the card in the box that best describes how much you agree with this statement. Now, please place each of the remaining cards in the boxes that best describes how much you agree with the smatement.

**SHUFFLE YELLOW STATEMENT CARDS AND HAND TO RESPONDENT. COLLECT CARDS AFTER RESPONDENT IS FINISHED AND PLACE IN APPROPRIATE ENVELOPES. ENTER ANSWERS ON QUESTIONNAIR. AFTER THE INTERVIEW IS COMPLETE)

SECTION II

Instructions On How To Fill Out This Section Of Booklet

This part of the booklet contains a number of statements young people have made about themselves. For each of the statements we would like you to simply put a circle around the number which best describes how true or untrue the statement is about you. Here is an example, where the respondent felt the statement was "somewhat true" of him.

	Very True	Quite True	Somewhat True	Not True At All	
	About Myself	About Myself	About Myself	About Myself	
I like to keep busy most of the time	1	7	(2)	1	

The person who answered this felt that the statement "I like to keep busy most of the time" was somewhat true of him.

Here again there are no right or wrong answers. What you, yourself, think is what matters. Remember to circle one number, and one number only, for each statement.

80-7	i	•			Not True
5 0	Very About	True Myself	Quite True About Mysel	Somewhat True f About Myself	At All
I believe that nowadays a person has to live pretty much for today and let tomorrow take care of itself	4		3 ,	2,	1
I do not like to see anyone receive bad news	4		· · · · · · · 3 · · · · ·	2	· · · · · · · · · · · · · · · · · · ·
I feel confident when directing the activity of others	4	l	3		
I believe there are many people who don't know what to do with their lives.	4		3	2	1.
I believe that the police should not hesitate to use force maintain order	4	,	3 ,	2	1
If I have a problem, I like to work it out alone		1. /		2	1
I like the feeling of going fast	4	ر با		2	1
I believe that in a society where almost everyone is out for himself, people soon come to distrust each other		\ 	3	/2	1
Rarely, if ever, do I do anything reckless		۰۱ م وا	`\ 3	2	1) 1
Sometimes I feel that my parents have no real understanding of what I want out of life	4			2	,.1
I spend a lot of time visiting friends.	4			2	1
I believe the society we live in is pretty good the way it is	4			2	1 n
I soretimes feel resentful when I do 't get my own way	4		3	2	1
I reel it's hardly fair to bring children into the world with the way things look for the future	4		3	2	1\ 1
I enjoy helping people even if I go don't know them very well	: , 4		, , , , , , , , , , , , , , , , , , ,	2	1
I believe that sexual behavior should be bound by mutual feelings, not by formal and legal ties	4	· · · · · · · · · · · · · · · · · · ·	3	 2	1
If I can get away with it, I will break any law which I think is bad	•		3)	1 , 2

			True Myself	Quite True About Myself	Somewhat True About Myself	Not True At All About Myself
In dealing with my family. I do believe that there really is a "generation gap"			4	-	,.2	
Sturidity makes me angry/ I am careful about the things I because I want to have a long ar healthy life	do	٠,	4 4	3	2	A STATE OF THE STA
I feel you sometimes can't help wondering whether anything is worthwhile			4			1 25
I feel that letting your friends not so bad because you can't do the time for everybody	good a	111	4	3	2	1 \ 26
When I am doing something, I off worry about what other people wi I would make a lot of changes in	ll thi					1 27
